methods
Should we be doing more at the OJC to ensure waste elimination - e.g., by eliminating or reducing disposable wrappings and utensils; using more recyclable/biodegradable items; and separating different kinds of waste for recycling and food for composting?
Could we be reducing food miles - e.g., by using as many locally grown/bought items as possible? If this means less out of season fruits and fruit and vegetables from abroad would that spoil the Kiddush for you?

Could we be reducing food miles - e.g., by using as many locally grown/bought items as possible? If this means less out of season fruits and fruit and vegetables from abroad would that spoil the Kiddush for you?
Is it the OJC’s responsibility to buy Organic produce to avoid herbicides and pesticides used in farming practices?
We serve food on china and glass bowls and plates (rather than single use plastic) but we need to change to serving kiddush wine in small glasses. To do so we will need more volunteers to help clean up after kiddush.
A solution to becoming more eco-friendly could be to produce cakes and biscuits in the OJC kitchen. This would reduce mileage and ensure choice of wholesome ingredients and prevent the need for packaging. Could you volunteer once every couple of months to come in to the OJC for a couple of hours to help cook. If so contact
